MAKE THE MOVE

The maturity of the Information Technology era has led to a meteoric rise in the adoption of the paradigm, "Compute Anytime, Anywhere". Further, the exponential increase in the cost of IT infrastructure and resources has provided a decisive momentum to concepts that promote efficiency in resource utilization and sharing.

The age of Mobile and Cloud computing has truly dawned and is here to stay, forever.

We at Unistanz recognise this change. For more than a decade, we have aligned with the needs of our clients and have helped them successfully adapt to the shifts in the IT arena.

Today, we are assisting our clients in countering the challenges of extending enterprise applications to user friendly Mobile Apps. We are well equipped to take complete ownership of your applications and publish them in our secure Cloud environment, resulting in substantial savings.

Read on to know more about our services and decide on how we can help you make the move.

APPLICATION SERVICES

We provide the entire range of services that you need for managing your software application requirements.

Services	Application Platform	
	Enterprise	Mobile
Application Development: We provide end-to-end application development service through the Turnkey and Time-and-Material Models.	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Application Migration & Extension: We enable migration of enterprise level applications from legacy platforms to the desired technology platform and extend them through mobile apps to unlock their potential.	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Information Security: Through best practices, essential Audits and related Security services, we protect our clients against internal and external security threats.	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Support: We provide post deployment support through convenient Annual Maintenance Contracts.	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

CLOUD SERVICES

Our Cloud Services offer a unique combination of application development, hosting and support services.

This includes developing and installing the application on our Server (Unistanz in-house), applying security standards and administration policies, publishing the application on the web, providing optimum access and also making enhancements to the application.

Further, we also offer Helpdesk and Application Support to manage the application on a day-to-day basis. The Support can be extended during normal office hours as also on a 24X7 basis depending on the requirement.

Our Cloud Services are backed by an extremely reliable infrastructure based on industry standards. Our hosting environment, highly available through redundancy, gives you peace of mind and frees up your resources that can be employed to conduct your core business.

Our Pay-per-App model and easy cost allocation gives you an affordable and hassle-free solution, with a Single Service Provider advantage. While there are absolutely no in-house activities at your end, our Cloud Services ensure that your organization's standards are adhered to and that your ownership rights are protected.

TRAINING SERVICES

Unistanz offers training programs on all subjects of interest to you. Be it in the technology domain, project management or inter-personal and soft skills.

Our Training Programs Team understands your requirements in detail and adds value by suggesting the best training model suitable for your audience. In addition, the team provides trainers hand-picked for the assignment to ensure that you get the desired results.

RESOURCES

• Shared Services

We have devised an extremely low cost model for supporting live applications through Shared Services. We can deploy resources to meet your requirements on the following basis:

1. Scheduled Visits with On-Call Support

In this model, we designate a competent resource who visits your site periodically, say once a month and conducts routine support tasks. A fixed amount is billed on a monthly basis for the scheduled visit whereas the additional support is billed for the time spent on an hourly basis.

2. Short Term Deployment

In this model, a resource is deployed at your site for a short term ranging from a couple of days to less than a month for completing tasks. Here, you buy a fixed number of mandays at the start of the year and then utilize the same in multiple short term deployments.

• Onsite Resources

We support the in-house application development and support model by providing technology experts onsite as per your requirements. As a thumb rule, the experts are short listed first from the existing team at Unistanz. This is to ensure that the all-important ethic of customer service is well ingrained in the resource.

In case a resource is not available within the team, we source the expert from the job market and conduct numerous rounds of written and personal interviews. The resource is forwarded to the customer only after we are completely satisfied with the calibre and attitude of the resource.

- **Project Team**

We provide deployment services spanning entire project teams, through onsite-offsite project execution.

1. Offshore Project Execution

We support the offshore project execution model wherein the Project Team is based in India and the project is executed through close coordination between the client based in another country and the Project Team using the latest communication techniques. Unistanz has a strong document driven approach to application development. This has a substantial impact on the final outcome.

2. Onsite-Offshore Project Execution

This model is a variation of the offshore project execution model. This model is suitable for large and complex projects that require continuous transfer of domain knowledge and frequent design changes to achieve the customer's objectives.

Here, the Project Team is divided into 2 sub teams. The first sub team is stationed at the customer site to execute parts of the project that require interaction with the customer and / or with the customer's infrastructure.

The second sub team is stationed offshore at Unistanz's office in India to execute parts of the project that do not need interaction with the customer.

TECHNICAL COMPETENCIES

Microsoft

- Sharepoint
- .NET Framework
- SQL Server
- Office

Mobile

- Android
- iOS

Oracle

- Oracle Database System

IBM

- Notes

Open Source

- PHP
- MySQL

CLIENTS

Banking, Financial Services & Insurance

- ANZ Banking Group
- HDFC Life
- HDFC Mutual Fund
- YES Bank
- Edelweiss
- Motilal Oswal Financial Services
- Angel Broking

Logistics

- DHL Express India
- DHL Global Forwarding

Engineering & Construction

- Larsen & Toubro
- Essar
- Hubtown
